- network-based communication with cinema technology
- 24/7 real-time system monitoring, no content management
- effective addition to preventive field support
- fixed operating costs
- annual subscription for exhibitors and integrators

MONITORING

DIAGNOSTICS

PREVENTION

PROACTIVE SUPPORT

The analysis of the data collected by HEIMDALL is based on two decades of integrator and maintenance experience, so we predict possible technical events with high probability. In this way, no revenue is lost and operational risk of cinema technology can be reduced to a minimum.

SUPPORTED MANUFACTURERS

HEIMDALL fully supports HeyLED, CHRISTIE, DOLBY and GDC cinema technology products. Support for certain dvLED cinema screens, BARCO and SONY systems is already available, and the range of compatibility is constantly expanding.

20 YEARS OF EXPERIENCE

The story of HEIMDALL began in 2007, when our cinema integrator team first installed a DCI projection system. Based on this more than 15 years of experience, we continued to develop the monitoring system in recent years, which process reached the testing stage in 2022 and has now become available to our partners and cinema industry players.
